

Standard of Procedure

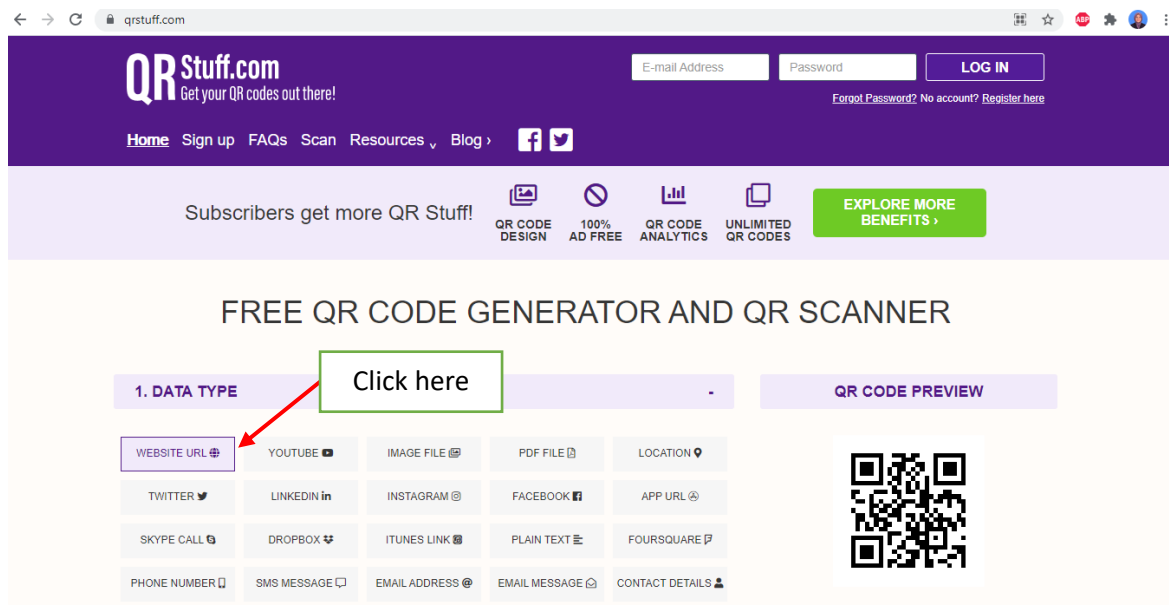

Creating QR Code

How to make the QR Code for URL link.

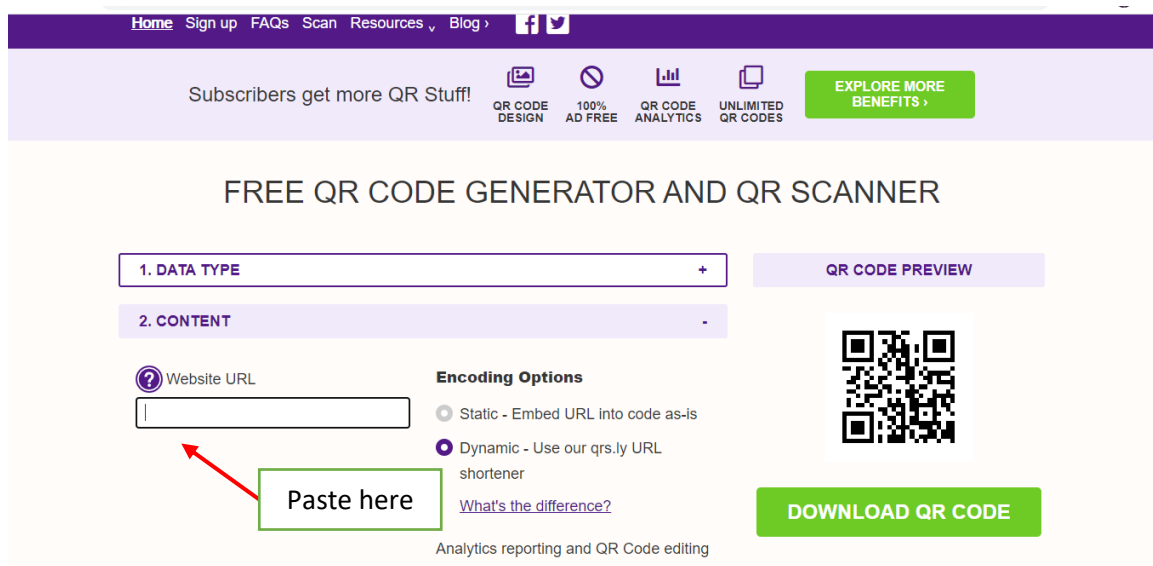

In this simple manual, it shows how to generate the QR code without ads and any involvement of payment.

1. Generating the QR Code.

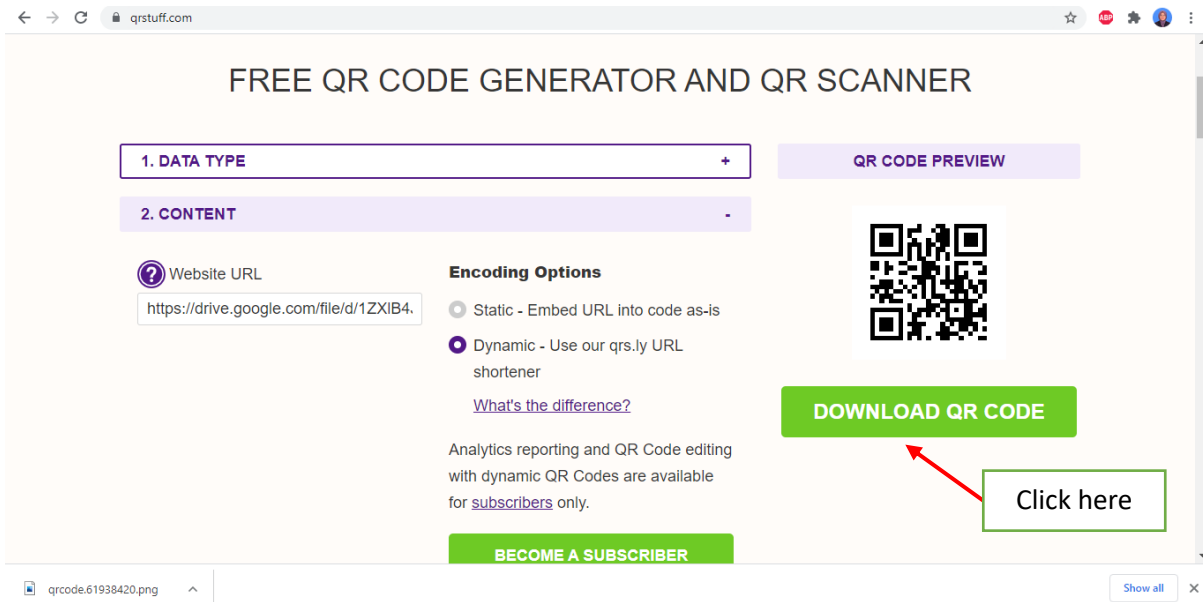

-Go to the <https://www.qrstuff.com/> website and select the website URL in the data type section.

-Paste the URL link for example <https://www.decollege/referralprogramme/abdulmalik.jp/>

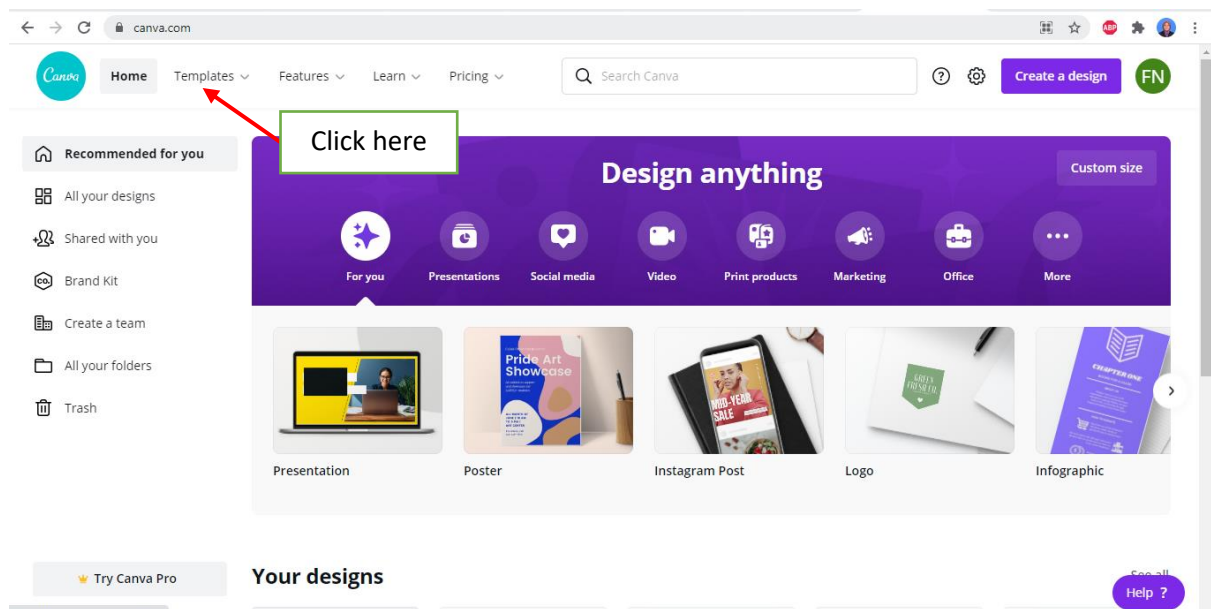

-The QR Code was generated, and the code can be downloaded in PNG file.

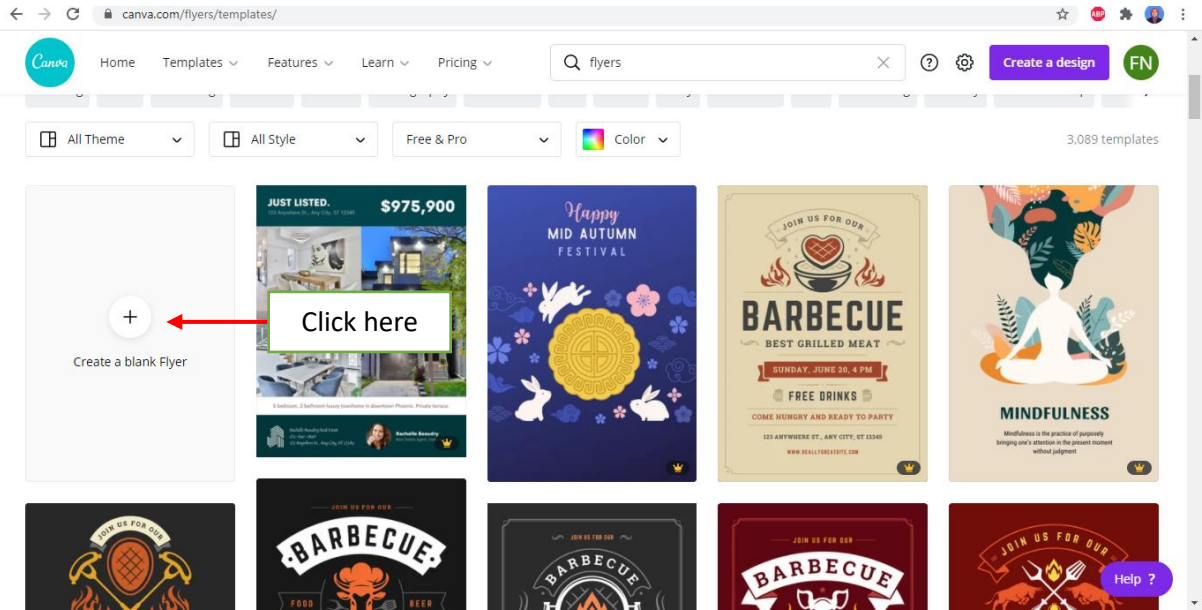

2. Combining the flyer and the QR code.

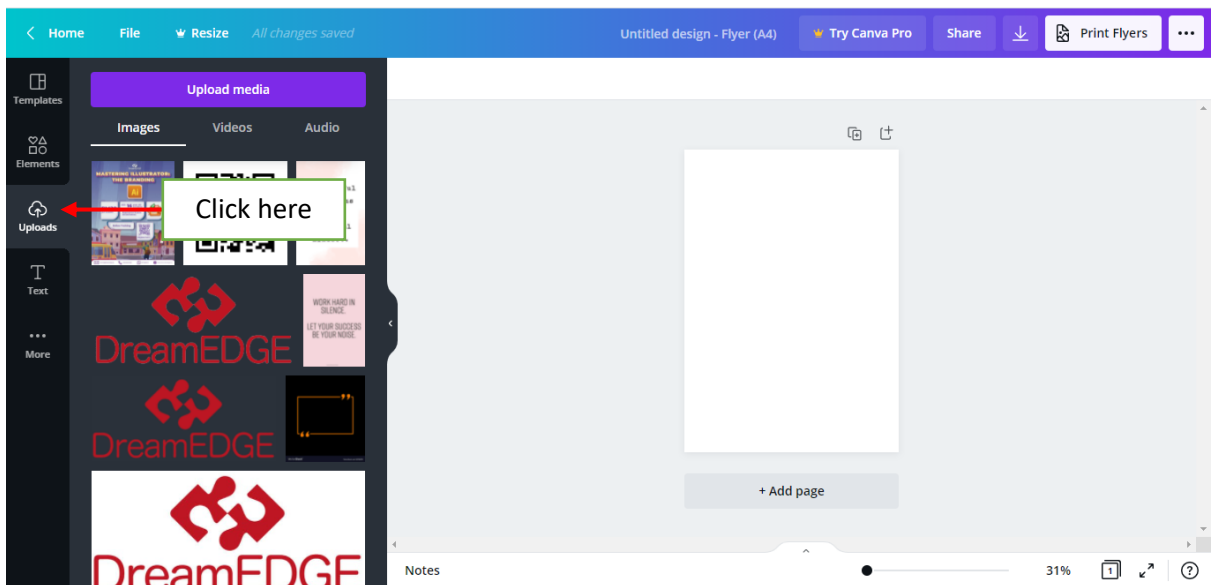

-Go to the <https://www.canva.com/> website. Select the templates as shown in the figure and choose flyers under the marketing section.

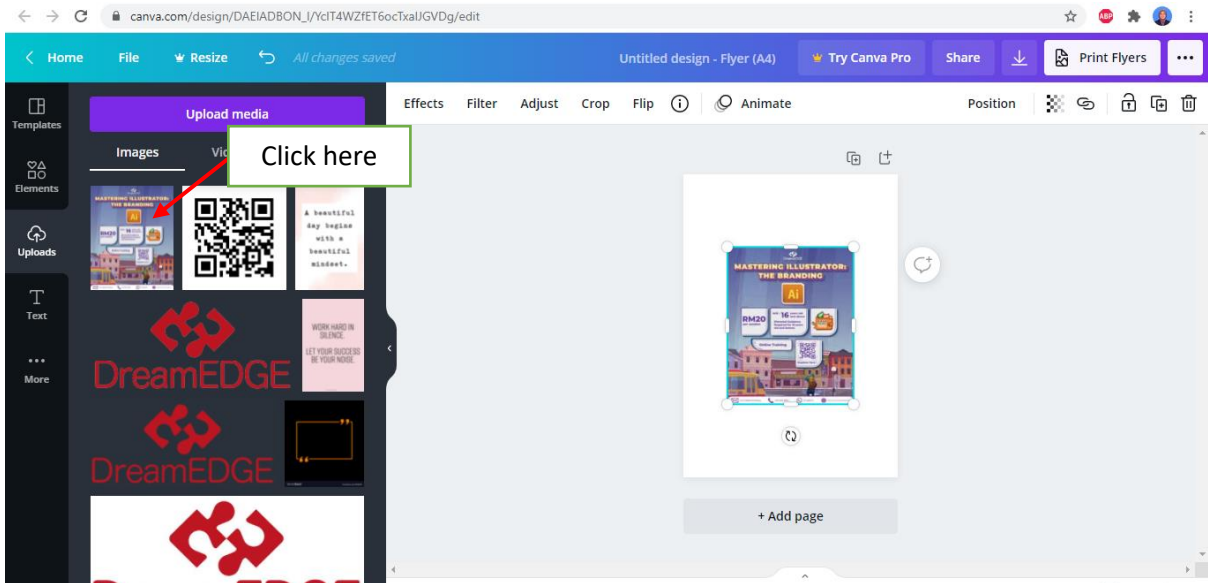

-Create a new blank flyer as shown in the figure below.

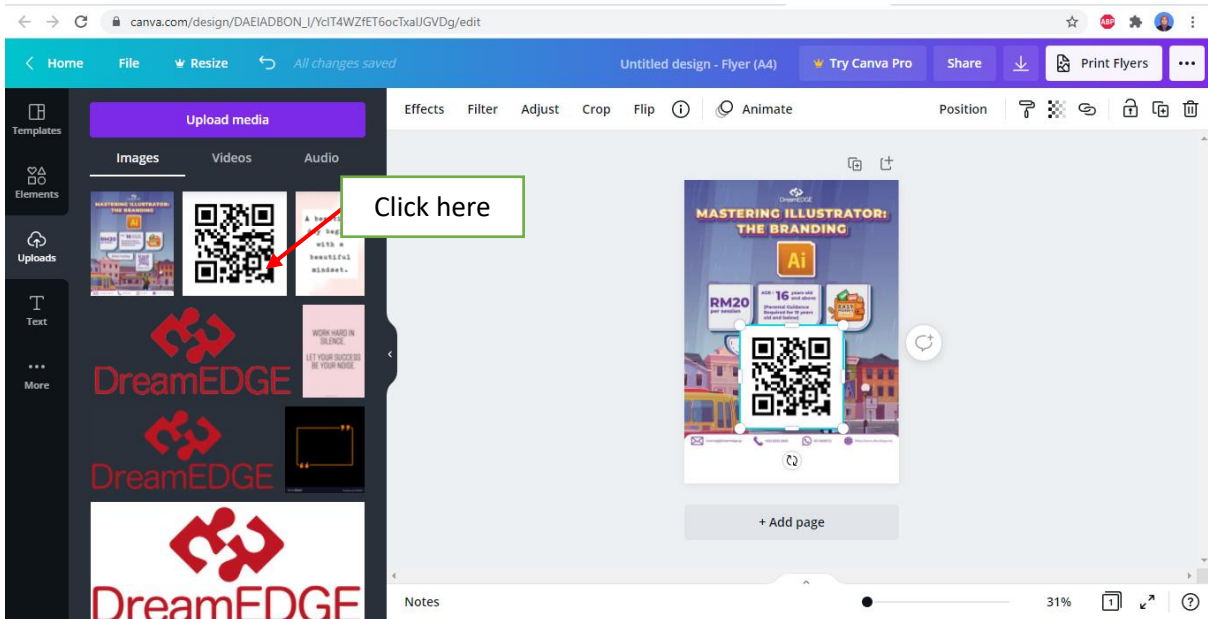

-Upload the selected image in the uploads section.

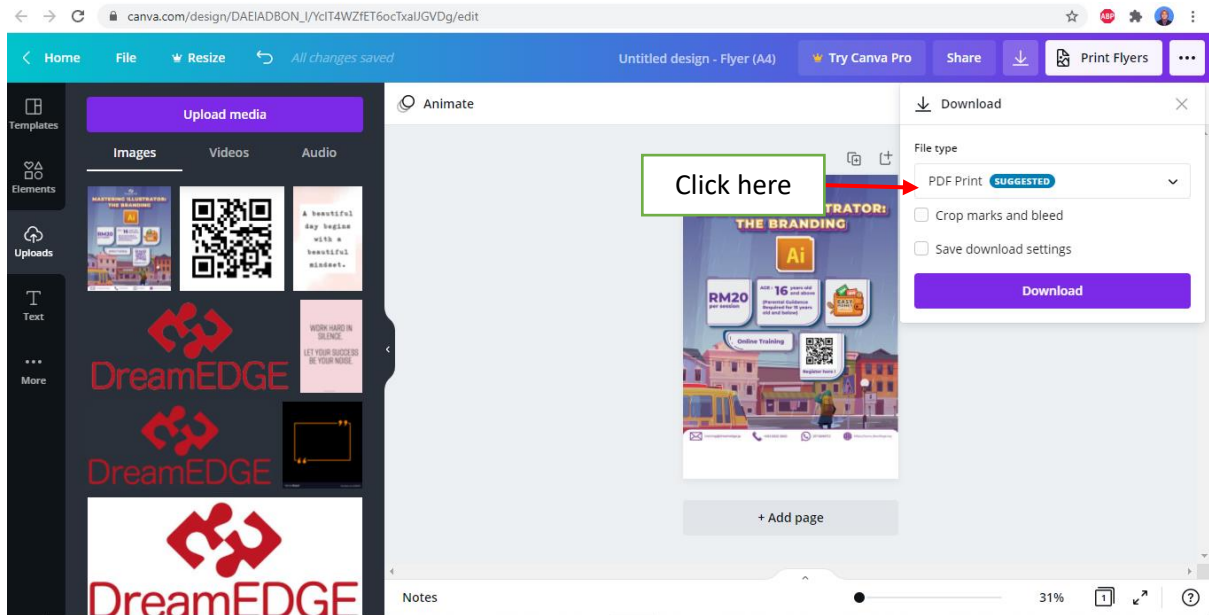

-Select the first picture. Adjust and drag until it fits with the background.

-Then, select the second picture and adjust it until it fits to the required position.

-After done editing, you can download the file and choose the format of the file.

3. The file is ready to be blasted.
